

ORAL HEALTH IN MICHIGAN

SB 541: Dental Therapy Scope of Practice

What can dental therapists do?

SB 541 would allow dental therapists (DT) to perform the most commonly needed preventive and restorative dental care:

ORAL ASSESSMENTS

TREATMENT PLANS

SIMPLE CAVITY PREPARATION

FILLINGS

SIMPLE EXTRACTIONS of primary and secondary teeth

Q. With less training than a dentist, is it safe for dental therapists to perform “irreversible procedures”?

A. YES!

Dental therapists are trained to the same standard as dentists on a smaller number of procedures. Dental therapists are licensed in 50 other countries and states in the U.S. In January 2013 the ADA’s Council on Scientific Affairs conducted a systematic review of oral health outcomes produced by dental teams incorporating midlevel providers, finding “the results of a variety of studies indicate that appropriately trained midlevel providers are capable of providing high-quality services, including irreversible procedures such as restorative care and dental extractions.”
